SMOKING STATUS OF FILIPINO CHILDREN & ADULTS
- **CURRENT SMOKERS**
  - those who smoked during the survey either on a “daily” (at least one cigarette a day) or on a regular/occasional basis; those who do not smoke daily but who smoke at least weekly or those who smoke less often than weekly.

- **FORMER SMOKERS**
  - those who have ever smoked in the past year prior to survey whether on a daily basis or an aggregate lifetime consumption of at least 100 cigarettes but not daily, and are no longer smoking at the time of the survey.

- **NEVER SMOKERS**
  - those individuals who have never smoked at all.

25.4% or 1 in 4 adults, 20 years old and over are current smokers

There is a significant decline in the prevalence of smoking among adults from 2008 to 2013.

6.8% or 7 in 100 children 10.0 to 19.9 years old are current smokers

A decrease in the prevalence of smoking among children from 2008 to 2013 is also observed, although results are not statistically significant.

The top three regions with the highest proportions of current adult smokers are Zamboanga Peninsula (31.3%), Central Luzon (31.1%) and CARAGA (28.4%).
SUMMARY

There is a significantly higher proportion of current smokers among the rural poor than in their urban counterparts.

1.8% of adults are current smokeless smokers; 2.5% were males and 1.1% were females.

40.6% of children reported to have been exposed to secondhand smoke at home.

Overall, 36.6% of adults have reported to have been exposed to secondhand smoke at home; exposure is higher among females at 39.6% than males at 33%.

Reported exposure to secondhand smoke outside the home is higher among males at 67.1% than females.
